News Release

MPulse Maintenance Software™ supports Firefox

(June 2007) Eugene, OR – MPulse Maintenance Software, an industry leader in innovative, user-friendly EAM / CMMS software recently completed the development necessary to support Firefox® browsers for all InfoNet products in addition to Microsoft's® Internet Explorer®.

InfoNet products are a family of products that only require a browser to access. No software needs to be installed on the user's desktop machine to use InfoNet products. InfoNet products are used by requesters of maintenance services, technicians to view work history or create and complete work orders, or senior management to get instant access to maintenance data.

The depth and breadth of the InfoNet products allows organizations using MPulse Gold or WorkFlow desktop products to extend their system to their customers and staff while maintaining 100% control of data integrity in the system. The InfoNet products are; InfoNet Request and Tracking System, InfoNet Work Order Explorer, InfoNet Work Performed Reporter, InfoNet Email Notification System, InfoNet Request Approval Manager and InfoNet Inventory Request System.

InfoNet supports Firefox v2.0 and higher. The Firefox browser has become a favorite of some Windows users as well as Apple Macintosh users and those using the Linux operating systems. "We elected to support our customers who have opted to use an alternative browser to Internet Explorer and are working in the Open Source community", states Randy Brous, Director of Development for MPulse Maintenance Software.
